

Frontiers In Space

Philip Bono, Kenneth William Gatland

Frontiers of Space Exploration Roger D. Launius, 2004-03-30 Since the first rocket-technology experiments of the early 20th century, space exploration has captivated the world. Recent advances and setbacks have included the new discoveries from the Galileo mission, the Mars Global Surveyor's revelation that water once existed on the Red Planet, the International Space Station, the advent of space tourism, and the devastating Space Shuttle disasters. This one-stop guide to space exploration provides a wealth of information for student researchers. A substantial 'Chronology of Events' and a narrative history outline the key events and people in the progression of space research and activity. Five topical essays—including a look at the Space Shuttle—examine several significant issues related to the politics and technology of space exploration from an international perspective. These chapters elucidate several sets of documents that give shape and substance to the larger story. Primary documents in this volume are organized by theme and represent the variety of materials available to anyone seeking a better understanding of the rise of space exploration. Also included are biographical sketches of key people associated with space flight, a listing of the human space flight missions undertaken since 1961, and an annotated bibliography of additional reading.

New Space Frontiers Piers Bizony, 2014-10-15 Take a journey into the New Space Frontier! It is easy to imagine that the space shuttle's retirement has edged the Space Age toward closure, at least in terms of human flight beyond the bounds of earth. In fact, there are more people-carrying ships being constructed now than at any time since Yuri Gagarin became the first man in space half a century ago. Some are already servicing the International Space Station - which, incidentally, has ensured a permanent human presence in space for the last two decades, and is set to continue and expand for decades yet to come. What's more, NASA is no longer the only big player in the space game. Commercial, non-governmental space exploration is becoming a reality rather than just a pipe dream. What orbital adventures await us in the next five decades? Will humans ever again head into deep space, as the Apollo astronauts once did? NASA's new hardware is aimed toward asteroid missions, and ultimately, Mars, but there is a significant chance that a government funded space agency will not be the only - or even the first - organization to send humans across the solar system. Get ready to experience the excitement of adventure with New Space Frontier. Through gorgeous photography and engaging writing, noted space and science author Piers Bizony speculates beyond just today's hardware and explores what might be possible for the next generation.

Frontiers of Space Philip Bono, Kenneth William Gatland, 1969

Opening New Frontiers in Space National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on New Opportunities in Solar System Exploration: An Evaluation of the New Frontiers Announcement of Opportunity, 2008-08-21 The New Frontiers Program was created by NASA in 2002 at the recommendation of the NRC's decadal survey for solar system research. In order to optimize solar system research, the NRC recommended a series of principal-investigator missions that encourage innovation and accomplish the main scientific objectives presented in the survey. Two of the five recommended missions have been selected and, as was also recommended in the survey, the NRC was asked in 2007 to provide criteria and guiding principles to NASA for determining the list of candidate missions. This book presents a review of eight missions: the three remaining from the original list of five from the survey plus five missions considered by the survey committee but which were not recommended. Included in the review of each mission is a discussion of relevant science and technology developments since the survey and set of recommended science goals.

The New Frontiers of Space Stefania Paladini, 2019-08-06 There are few industries in today's world as dynamic and dramatically changing as the space sector, with new ventures and initiatives being announced on a daily basis. As well as emerging countries improving their launching and manufacturing capabilities, private actors are beginning to join public bodies in the space race, and participating in what is frequently being referred to as the new space era. With fantastic opportunities arising for business and economics, this book provides a comprehensive overview of the space sector, exploring recent initiatives, and the most important areas of investment in the industry, including emerging fields of activities such as asteroid mining and space tourism. It also addresses traditional and non-traditional security issues in the sector, together with discussing their legal implications. This interdisciplinary book provides insights for practitioners and researchers alike, particularly those involved in technology and innovation management, emerging markets, international relations, and security studies.

Frontiers in Space Set, 6-Volumes Joseph A. Angelo, 2007-09-01 Uses space technology to introduce fundamental principles in mathematics, biology, chemistry, physics, and environmental science. This title presents students with information from a variety of space-related science and math educational materials sponsored by such government agencies as NASA and the National Oceanic and Atmospheric Administration.

TIME New Frontiers of Space The Editors of TIME, 2013-07-16 What's new in the universe? Journey with the editors of TIME as they explore the latest scientific discoveries within our solar system and beyond. Recent advances in technology have helped astronomers put to rest centuries-old debates about space and the universe, but they have also raised newer,

more intriguing questions: What is the nature of dark matter and what does it tell us about the origins of the universe? Does new data strongly suggest that microbial life exists beyond Earth — in our own solar system? How does the discovery of far more exoplanets than scientists once estimated impact the odds that advanced life may exist elsewhere in the universe? Are space tourism and commercial asteroid mining feasible? TIME explores these topics and more in a stunning view of the final frontier.

Frontiers of Space Risk Richard J. Wilman, Christopher J. Newman, 2018-06-13 CHOICE Recommended Title, March 2019 This book brings together diverse new perspectives on current and emerging themes in space risk, covering both the threats to Earth-based activities arising from space events (natural and man-made), and those inherent in space activity itself. Drawing on the latest research, the opening chapters explore the dangers from asteroids and comets; the impact of space weather on critical technological infrastructure on the ground and in space; and the more uncertain threats posed by rare hazards further afield in the Milky Way. Contributors from a wide range of disciplines explore the nature of these risks and the appropriate engineering, financial, legal, and policy solutions to mitigate them. The coverage also includes an overview of the space insurance market; engineering and policy perspectives on space debris and the sustainability of the space environment. The discussion then examines the emerging threats from terrorist activity in space, a recognition that space is a domain of war, and the challenges to international cooperation in space governance from the nascent asteroid mining industry. Features: Discusses developments and risks relevant to the public and private sectors as access to the space environment expands Offers an interdisciplinary approach blending science, technology, and policy Presents a high-level international focus, with contributions from academics, policy makers, and commercial space consultants

Exploring Space, 2010

The Universe Helen Whittaker, 2011 This book assumes space is an unconquered frontier and describes the routines and technology for knowing and understanding the universe. High Interest organization (examples food in space, hygiene and space, vomit comet). Color coded timelines, photos, charts, illustrations. Future Focus final chapter.

Professor Astro Cat's Frontiers of Space Dominic Walliman, 2022-02-15 Blast off with this new edition in the first book in the best selling Professor Astro Cat series! Featuring updated details about how rockets work, recent missions to Mars, space junk, and black holes. "Conducted by a cat in a retro-futuristic space suit, this tour of the solar system and beyond earns style points for both its illustrations and its selection of "Factoroids." -Kirkus Reviews Cute characters (such as the titular Professor Astro Cat and his assistant Astro Mouse) give a humorous, conversational tone to this nonfiction book's information about space, our solar system, and changing space exploration technology. Like the text, the book's browsable layout encourages readers to keep exploring. Overall, a great book to nurture interest in and wonder at the infinite possibilities of space. -The Horn Book Both modern in its scientific spirit and with a sensibility modeled after the delightful

mid-century children's books from the Golden Age of space exploration, it tickles young readers - as well as their space-enchanted parents - into precisely that "palpable zest to make contact with the cosmos." -Brain Pickings Professor Astro Cat is the smartest cat in the alley. He's got a degree in just about every discipline under the sun! Speaking of the sun, he happens to be specialist on that too, and Professor Astro Cat's *Frontiers of Space* will tell you everything that there could be to know about our star, our planet, our solar system, our galaxy, our universe, and many more new insights into the ever-developing science of space and the outer reaches of the universe! The professor's made sure of that; he's a fastidious little feline! Professor Astro Cat's *Frontiers of Space* also explores topics such as gravity, extraterrestrial life, time, and many other fascinating subjects that will take you and your children on a journey to the very frontiers of space!

Space, the Final Frontier? Giancarlo Genta, Michael Rycroft, 2003-02-13 What are our motivations for going into space? Where does our long-term space future lie? Why, and how, should we strive to reach, if not for the stars, at least for the Moon and Mars? This exciting book looks first at the progress that has already been made in our attempts to explore and expand beyond the Earth. Current and past space technologies and space stations are described, and the effects of the space environment on the human body are explained. A discussion of the merits of the robotic exploration of space is followed by a look at our exploration of the Moon and Mars. Final chapters touch on propulsion methods required for leaving our solar system, and ask which of the possibilities for future space travel is most likely to succeed. This thought provoking book will appeal to all those with an interest in the future of space exploration.

The Right Stuff Tom Wolfe, 2008-03-04 Tom Wolfe at his very best (The New York Times Book Review), *The Right Stuff* is the basis for the 1983 Oscar Award-winning film of the same name and the 8-part Disney+ TV mini-series. From America's nerviest journalist (Newsweek)--a breath-taking epic, a magnificent adventure story, and an investigation into the true heroism and courage of the first Americans to conquer space. Millions of words have poured forth about man's trip to the moon, but until now few people have had a sense of the most engrossing side of the adventure; namely, what went on in the minds of the astronauts themselves - in space, on the moon, and even during certain odysseys on earth. It is this, the inner life of the astronauts, that Tom Wolfe describes with his almost uncanny empathetic powers, that made *The Right Stuff* a classic.

Reopening the Space Frontier John Hickman, 2010 Reopening the Space Frontier escapes the usual arc of space policy analysis focused on technological choice and instead explains the international legal and political economic barriers to the

renewed exploration, development and settlement of celestial bodies like the Moon and Mars. The science and engineering of the mid-twentieth century were sufficient for human landings on the Moon. Yet today the human adventure in space is limited to visits by small numbers of astronauts to a single space station in Earth orbit. As the author explains, using the institutions that opened terrestrial geographic frontiers in the past provides the effective means for reopening the space frontier. Along the way he demolishes the wishful thinking that has shackled popular thinking about space policy. International competition rather than international cooperation motivated states to open terrestrial frontiers for centuries, and that motivation will have to be harnessed again for our species to permanently occupy other worlds of the solar system.
